

IT UNIVERSITY OF CPH

Eevee

#133

Main capabilities:

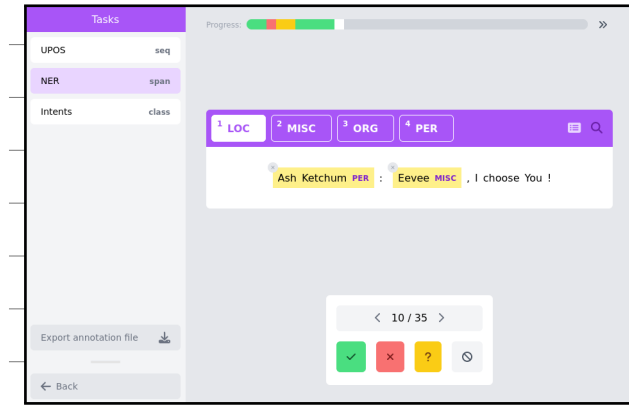

- Clean, minimal GUI
- Conll-like data format
- No install required
- Can be used with MaChAmp and huggingface datasets

Eevee is a simple, free, and flexible annotation tool built around tab-separated files. It requires no installation as it runs directly in the browser. The intuitive interface allows users to import a dataset and set up annotation tasks quickly.

More information at:
<https://github.com/AxelSorensenDev/Eevee>

How to use Eevee

This is the annotation interface, where we support keyboard shortcuts and automatic word alignments for the word/span level tasks to speed up annotation:

This is the setup screen, where we pick the task-type and define in which columns the input words and the target labels are:
